Armand's Site

1. Move video up, put app store buttons below video, make logo on left bigger and push writing beneath the logo down on desktop.
2. Move video up on landing page and put app store buttons just beneath (make home page smaller) on mobi.
3. Tip text on video is "O-link" instead of "Full Screen"
4. Grey spacing between landing page and "Download the app" on desktop.
5. "How it Works" section, selected number and number being hovered over different colours?
6. "How It Works" descriptions need some fixing up.
   - Menu bar currently reads "How it Works". The "i" needs to be capital.
7. Website icon (appears in tab) is white, please make it black.
8. Question drop down is behind video player
9. Click question icon to get dropdown to disappear?
10. O-link icon should return me to top of screen.

Ronnie's Site

General

Sign Up - Both

✓ 1. Email is case sensitive, that should not be the case.
✓ 2. ID thing get filled out automatically (awesome) but not immediately clear it's for ID so perhaps add description after first 6 numbers
✓ 3. When a user clicks sign up, and hasn't adhered to all the checks, they often get confused as the "Sign Up" button is clickable even if they haven't entered everything in correctly. For example, one of our friends said the following: "I thought my internet was just slow when I clicked and nothing happened but it was because my description was too short". As a result, we either need to make the "Sign Up" button unclickable when all the fields aren't correctly entered or we need to put red text below the "Sign Up" button that would say something like: "You have not correctly entered information in one or more of the above fields."
✓ 4. If a user is on sign up, has filled in their info and accidently clicks "Sign In, all there information is lost, there should be a pop up asking the user if they'd like to go to sign in.
✓ 5. When a user clicks "Other" for a matric subject, they should be able to add the name of the course, currently that functionality isn't available.
✓ 6. Please add "Consumer Studies" and "Dramatic Arts" as subjects to the IEB matric list.

Sign In – Both

✓ 1. Currently you click a button called "Log In" to access the "Sign In" page. Can we make the title of this page "Log In" please.
✓ 2. Email is case sensitive, that should not be the case.

Latest Job Posts - Student

✓ 1. Takes a while to populate, that's fine but give me a progress wheel so I know its working and there aren't just no jobs.

Time Periods - Student

✓ 1. If you manually select all the categories, "Select All" should get highlighted.

Job Categories - Student

✓ 1. Bartender not barman
✓ 2. Spaces between " / " should be consistent
✓ 3. If you manually select all the categories, "Select All" should get highlighted.

Open Job Offers – Student

✓ 1. If there are no results for a specific search, we should tell the user: "No Job Offers match your search criteria." It would be great if we could incorporate a progress wheel into our site as sometimes things do take long to load.

✓ 2. If I have applied for a job please include the relevant words "Declined, Application Pending, Provisional Acceptance, Got the Job" in the top right hand corner of each job offer. Show the same words at the bottom, below the "Applied" button in the job offer itself.

Job Offer - Student

✓ 1. Google maps widget is awesome but when my mouse goes over the widget my scroll stops and I zoom in or out of the map. If we can stop the google map from zooming that would be great. Rather allow the user to zoom using the "+" and "-" buttons.

2. Add a "Back" button at the bottom of the specific job, next to "Apply"

✓ 3. Pop up for accept offer. "Yes, I'm sure" should not be red, let's make it green.

✓ 4. Currently, once off jobs have their pay in the format "Rx/Once off" but the rates are entered per hour so the format should be the same as the other time periods, "Rx/hour".

Menu (1 – 2 Both & 3 Student)

✓ 1. Email notification switch is clunky, if there is a better glyph that would be great. We use rounded edges in the rest of the platform, so something with rounded edges would be better.

✓ 2. The enable, disable emailer pop ups are still problematic on the student side.

✓ 3. Add "Open Job Offers" to the menu, with a suitcase glyph. When clicked, go to the "Open Job Offers" page with all categories and time periods selected.

User Profile - (1 – Both & 2 – 5 Student)

✓ 1. After a user clicks edit, they make their changes and then the button at the bottom of their profile says "Edit" again, lets change that to "Confirm Changes" and then, once that is clicked, the user enters their password.

✓ 2. The additional info scroll box extends past white background; the text goes further down than the container.

✓ 3. Once a user has used all their applications, there is a pop up explaining that. The wording for that pop up should be "You have no applications remaining today." In that pop up, there should be a button that says "Buy Applications"

✓ 4. When editing your user profile, if you want to remove work experience / matric results / qualifications / certifications, you should get a pop up asking for confirmation.

5. When a student receives a rating and a comment, they should have the option to "Add" or "Don't Add" that work experience to their user profile. If they "add" the

> work experience, it simply gets added to their user profile with all the relevant information, if they "Don't Add" it, then it should just sit in Job History.

Jon History – Student

> 1. This is currently not working.

User Name - Student

✓ 1. Please put "X applications left" under every heading on every page and ensure that it works as follows:
   a. 2 applications remaining
   b. 1 application remaining
   c. 0 applications remaining
   d. Unlimited if the respective package has been bought
✓ 2. Maybe easier to say. "Applications remaining: x" and we just put unlimited if they buy that package.

Buy Applications - Student

✓ 1. Please change the three pricing tiers to:
   a. R29   (Same)
   b. R39   (Old use to be R49)
   c. R49   (Old use to be R99)

Post Job - Employer

✓ 1. When selecting, Once off as a time period, there needs to be an end date so that you can have once off work for a weekend etc. End date option should not be greater than 1 week.

Pop up for rating an employee - Employer

1. Please center the stars and make them bigger.

Employment History – Employer

1. The rating given to past employees should be displayed as stars, not a number.

View Applicants – Employer

✓ 1. When an employer views and employers profile, they currently have access to the student's email address and cellphone number. We need to remove the contact details of the students at all instances where a student's profile is visible to an employer. This should be the case even if the student is a past employer. Otherwise the employers can circumvent our service.

How It Works – Both

1. One of the items we have discussed with Ryno for the application, is a guide through the "how it works" pictures and descriptions when entering the app for the first time (as is done with PocketSlip). This page is then accessible from the menu bar.

2. My understanding, is that for this functionality to appear on the app, it needs to be present on the desktop version as they are one in the same.
3. As a result, can we please add a "How It Works" page to the menu. The page will be on the same background as normal and have the pictures and functionality exactly as is done on Armand's site except only should the relevant version (Student/Employer)

Functionality Issues

✓ 1. The job offer should not be available to students after the start time has passed, this happens with once off work that could start at a specific hour.
2. Currently if I as an employer post a job with only one position to fill and offer two students provisional acceptance, they can both accept the offer meaning that two students commit to a job offer for one student, which is obviously wrong.
   A. We should only allow the employer to make as many provisional acceptance offers as positions available. Students who are offered provisional acceptance are already forced to reply within 24 hours, which I think supports this solution's case.
   B. As soon as the positions are filled and students have confirmed, the outstanding applicants should all be automatically declined.
3. Currently, Job Offers aren't pulled once the job position(s) is filled. This is a major functionality issue which isn't working correctly (If I post a job for one position with a threshold of 10 and I provisionally accept one person and they confirm, that job offer should immediately be pulled off the platform. Job Offers should be pulled when the applicant threshold is met or when the number of open positions are filled.

Other

✓ 1. The O-Link logo in the menu bar is white, please can we make it black.
✓ 2. When log out clicked, a pop up is used for confirmation. Once confirming, another pop up then says you have been logged out with a button saying ok but the page automatically redirects so no need for the button.
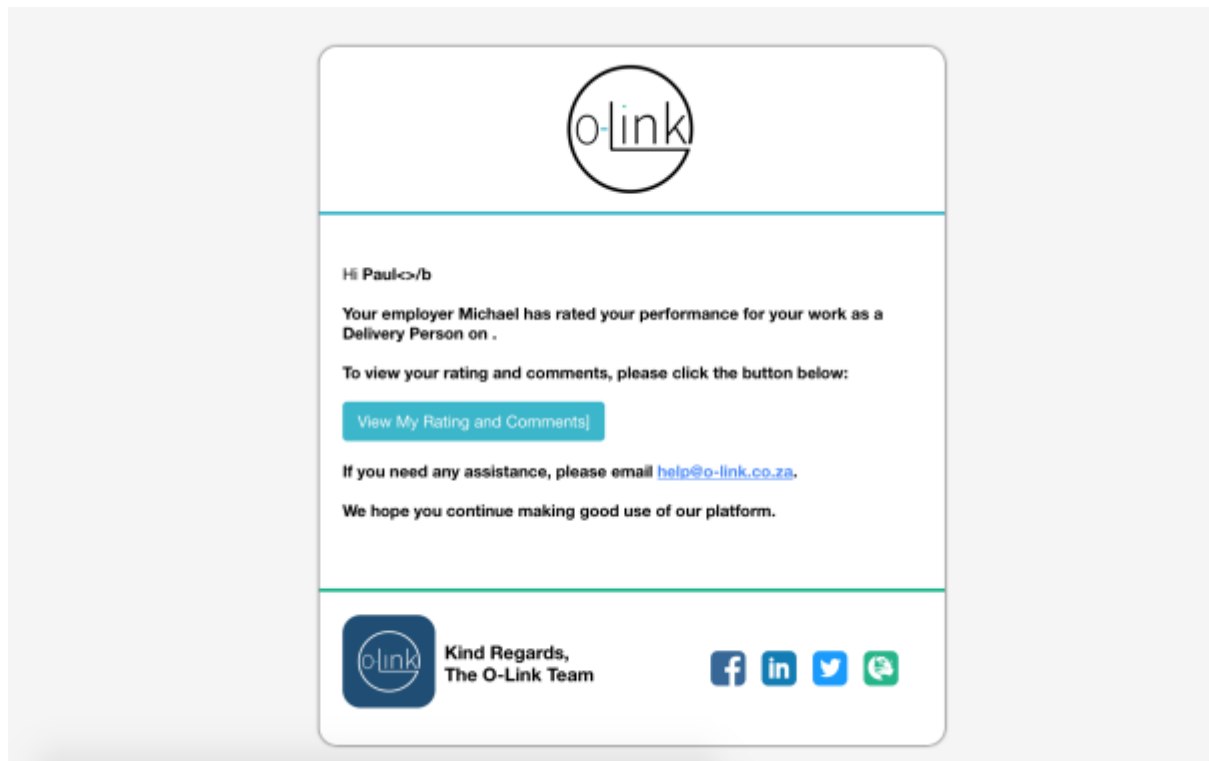

Mobi

1. The pop ups don't fit in the screen

Emails

Post job

1. Student should always have a capital letter 'S'
2. Student vs students in some emails
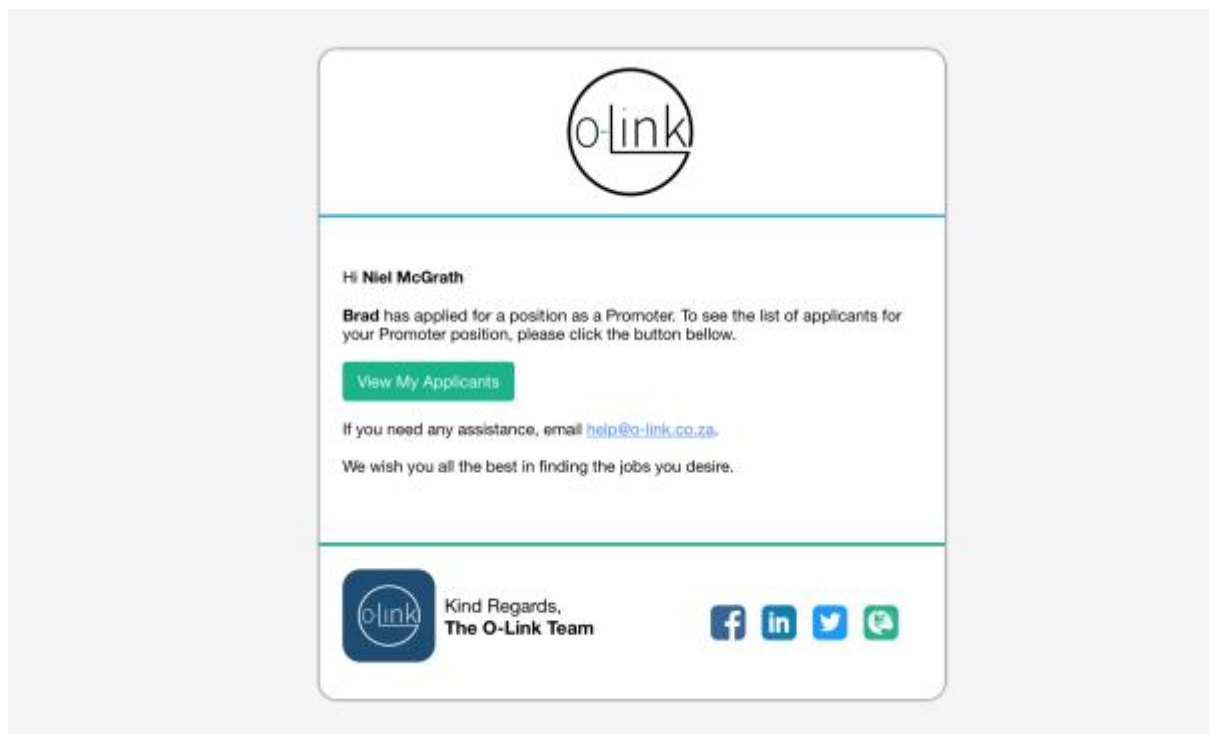

Application Has Been Made

1. a/an assistant

You Have Received a Rating

Declined for Job Offer

1. Subject reads "Declined for a job as a(n) Barman"

Application has Been Made for "Job Offer"

1. Can we change the paragraph below "Hi 'Employer Name'" to read as follows with the following bolding and correction of the spelling of 'below' to "bellow".
   a. **Student First Name** has applied for a position as a/an **Job Offer**. To see the list of applicants for your **Job Offer** position, starting on "start date", please click the button below:
